

Questionnaire, to be returned by email by Wed, August 26th

1. Your NAME and class year. Please write the first name the way you want me to address you.
 2. List the last 7 math classes you took in college or high school.
 3. Did you take Math 3351 or an equivalent course? If you took 3351, list the term and your 3351 instructor. If you took an equivalent course, provide the following information: the course title, where you took it and whether the course was proof-based, had some proofs or was almost entirely computational.
 4. Are you a math major? If not, what is your major/projected major? What are you planning to do after graduating?
 5. Rate your level of familiarity with each of the following concepts/techniques on the scale from 1 to 4 with
 - 4 meaning 'I am comfortable with this concept';
 - 3 'I studied this in detail, but do not feel comfortable'
 - 2 'I studied this before, but very briefly'
 - 1 'I never studied this before'
 - (a) matrix arithmetic and computation of determinants
 - (b) solving systems of linear equations using Gaussian elimination
 - (c) abstract vectors spaces
 - (d) linear independence, bases and dimension of vector spaces
 - (e) linear transformations between vector spaces and their matrices
 - (f) eigenvalues, eigenspaces and diagonalization of matrices
 - (g) basics of inner product spaces
- (a) and (b) will not be covered in 4651, so if you do not feel comfortable with some of this material, you should spend extra time on it in the first few weeks. It is not expected that you are familiar with (f) or (g) (especially (g)).
